NATIONAL ASSOCIATION OF REALTORS®

The Voice For Real Estate®

Win More Clients and Gain More Referrals with NAR *RELOCATION* REPORT!

What is the NAR *RELOCATION* REPORT?

The **NAR *RELOCATION* REPORT** series pinpoints where relocation clients are coming from and where they're going, on a county-to-county basis. In addition, it highlights the median incomes of households arriving and leaving each county. For example, the Palm Beach County, Florida report shows how many households moved in from New York County (NY), Bucks County (PA) and Bergen County (NJ), along with the median income of those relocating households.

Who is using the NAR *RELOCATION* REPORT?

Real Estate Professionals, Relocation Companies, Market Trend Analysts, City and Community Planners

How do real estate professionals use the NAR *RELOCATION* REPORT?

There are two primary ways that real estate practitioners are using the **NAR *RELOCATION* REPORT** to expand their business opportunities.

1) Advertise and Win Clients in those counties that are likely to relocate to the markets you serve. For example, suppose that you practice real estate in Phoenix (AZ) and the top three counties relocating to Phoenix are Essex County (NJ), Hampden County (MA), and Kings County (NY), and the median income of those relocating to Phoenix is significantly above the national average. Then selective advertising aimed at the affluent target audience should yield significant leads.

2) Referrals, Referrals, Referrals! Create and/or utilize your firm's referral network by advertising real estate services for those counties in which there is strong relocation demand. For example, each year more than 4,000 households relocate from Los Angeles County (CA) to Clark County (NV). If you practice real estate in Clark County (NV), it would be beneficial to advertise your partnered services in Los Angeles County (CA), in order to acquire referrals.

Methodology for NAR *RELOCATION* REPORT

Data for this report was obtained from the Internal Revenue Service (IRS) and is based on individual income tax returns filed by citizens and resident aliens. Only the tax returns for which the social security number of the primary taxpayer reported on the return in one year matched the social security number reported on the return filed in the previous year are included in the statistics. County-to-county migration is measured by the year-to-year changes of the county address codes in filed tax returns. If the county address was the same, then the taxpayer was counted as a "non-mover."

Note> Since the IRS data only tracks tax filers, it does not capture the whole population changes in a county. However, it may be of even more value to real estate professionals. Because tax deduction on the mortgage interest provides an incentive for homeowners to file tax returns to reap the benefits and the movements of those are included in the IRS data. On the other hand, the non-taxpayers, mostly newly arriving immigrants and low-income households, are the least likely groups to purchase a home.

Key Real Estate Statistics in 2007

MIGRATION STATISTICS	# of Households	Average Income
Total Non-Migrants	3,285	\$38,700
Non-Movers	2,956	
Movers w/in County	329

* Black - Black or African American AIAN - American Indian and Alaska Native NHPI - Native Hawaiian and Other Pacific Islander

Historic Relocation Trend

Income Index by Relocation Status

** **Income Index** is measured by the relative level of median household income of a certain resident group compared to the national median income of non-movers in 2000. The income statistics used are those reported on annual tax filing to IRS.

Migration Counties In/Out of Clay County, NC in 2008

Coming from			Going to							
State	County	# of Households	Income Index **	Distance ***	State	County	# of Households	Income Index	Distance	
1	NC	Cherokee County	71	92	19	GA	Towns County	40	144	10
2	GA	Towns County	31	129	10	NC	Cherokee County	39	83	19
3	GA	Union County	15	98	21					
4	GA	Cobb County	12	258	91					

** **Income Index** is measured by the relative level of median household income of a certain resident group compared to the national median income of non-movers in 2000. The income statistics used are those reported on annual tax filing to IRS.

*** **Distance** is calculated any two zip codes within the two counties and therefore may not necessarily match with the actual driving distance.
